smart suki – clever solution for a secure home

In a hectic everyday life, it is easy to forget or lose a door key, which can lead to inconvenience, cause standing in front of a locked door is not funny at all. By simply installing the smart suki on the existing cylinder, the front door becomes smart and can be conveniently opened and closed via smartphone. With smart suki you can be sure that you always have access to your home, even if you have forgotten or lost your key or the door has unexpectedly fallen into the lock.

The key to uncomplicated experiences

With just a few clicks in the sorex smartlock app, landlords can send their guests a digital key. On arrival, the guest simply locks the door with a click in the app. The access authorization itself can be limited to the booked length of stay and changed with a simple click. smart suki thus saves time for time-consuming key handovers and enables guests to check in and out easily 24/7 which also offers more flexibility.

Key management for entrepreneurs to the point

smart suki also offers numerous advantages for business owners. For example, it saves the cost of additional security keys or replacing locks if keys are lost. The time-consuming management of keys and logs is also a thing of the past with smart suki, as it stores all accesses and enables simple management and assignment of rights via the sorex smartlock app. New employees can be easily added digitally, access can be limited in time and authorizations can be changed again with a single click.

smart installed

Effortless installation in no time*

Simply attach it to your interior door over the existing profile cylinder. To do this, insert your key into the cylinder from the inside and place the smart suki on the key. It is attached to the side of the product with just 4 small screws. It is easy to remove when you move and leaves no traces behind. Additional equipment for installation on Swiss round profile cylinder as well as on British and Scandivavian oval Cylinder are available on demand.

* Installation is only recommended on cylinders with emergency and danger functions, as these can be locked from the outside even if the key is inserted on the inside.

The elegant and simple solution for retrofitting

In addition to simple installation via the existing cylinder, the smart suki is characterized by quiet door opening and closing, elegant design and an integrated battery. An intelligent charging cable, which also enables charging while the door is being opened, is included in the scope of delivery. The sorex smartlock app and extensive accessories expand the functions enormously. With the smart suki, you always have full control over your four walls and maximum flexibility.

Electronic keys
Unlimited number of users.

Light
Displays the opening status.

Simple operation
Open, install, reset function.

USB
For charging the battery.

Bluetooth technology
For opening and closing at close range.

Integrated rechargeable battery
For up to 1.500 openings.

Security
AES 128Bit encryption.

smart combined

More flexibility with the sorex netGateway
With the sorex netGateway, you can conveniently open and manage the smart suki from anywhere using the app. It is installed near the door lock. It can be managed via the sorex smartlock app.

Codepad for even more freedom
The battery-operated wireless code pad extends the opening functions of the smart suki using fixed or randomly generated numerical codes. This means that the door can also be opened from the outside via code.

Alarm system with door sensor
Thanks to the sorex door sensor, the smart suki becomes a reliable alarm system. The app sends a notification to your cell phone if the door is unlocked. The door sensor is managed via the sorex smartlock app.
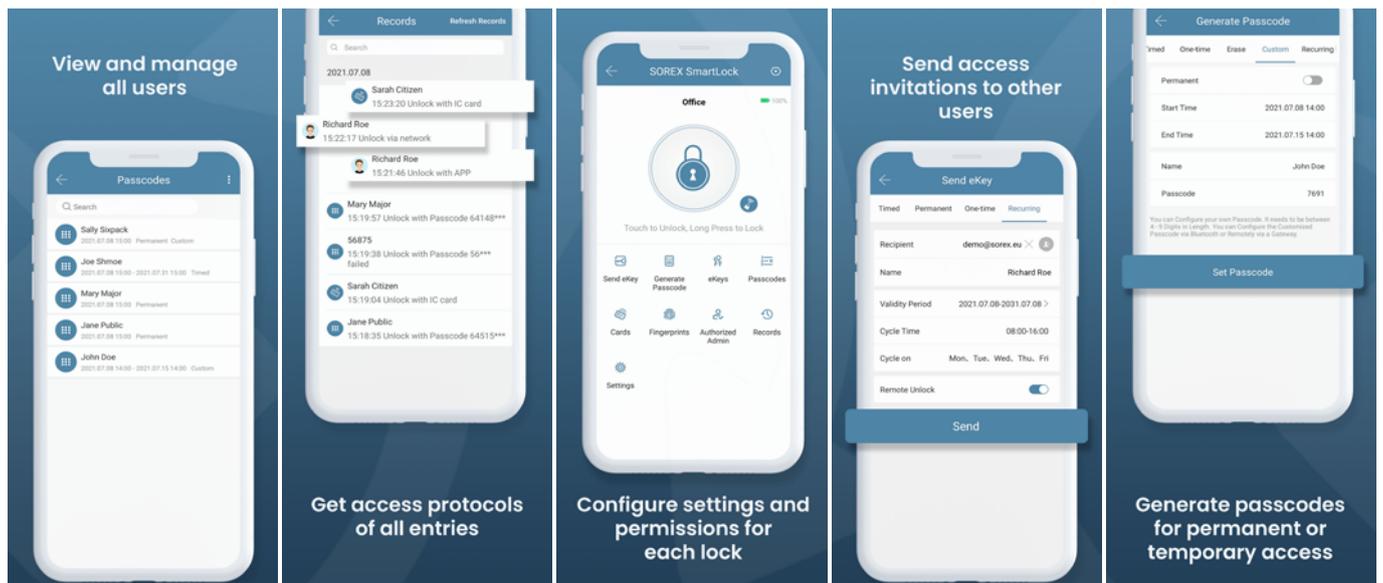

Convenient access via remote door opener
In combination with the remote door opener, you can open your door lock at the touch of a button from a range of up to~10 meters using Bluetooth technology. The remote control is managed in the sorex smartlock app.
