Introducing HybridCarb® — a better choice from Ipsen

The new HybridCarb® from Ipsen is an ultra-efficient gassing system designed to replace endothermic generators and other gassing systems. Its core strength is precision gas control. Instead of burning excess gas off, the process gas is reconditioned and reused, increasing efficiency up to 90%. HybridCarb allows for the reduction of more than 40 tons of CO₂ per year – the equivalent of planting 220 trees.

Other benefits of HybridCarb include:

- Quick and easy hookup
- Increased carburizing efficiency
- Improved hardness uniformity
- Significantly less expensive to operate than endogenerators
- Consumes significantly less gas
- Environmentally friendly and cost efficient

INDUCTION

Induction Hardening provides less distortion than carburizing

- *Experts in Induction Hardening Gears:*
 - Large Diameters
 - Internal & External
- *In-house Engineering & Tooling*
- *ISO 9001:2008 certified and CQI-9 compliant*
- *30-year Member of Metal Treating Institute (MTI), AGMA and ASM*
