

Business internet

- Available in 7 variants
- Symmetrical bandwidth up to 10 Gb/s
- Standard Anti-DDoS
- Freedom of choice to use own IP addresses or Eurofiber IP addresses
- Redundancy on the infrastructure (fibre optic) & diverse protocols
- Provided over the most reliable fibre optic connections
- Network monitoring centre available 24x7

Do you want to do business reliably online? And always be accessible with high internet speeds? Eurofiber business internet offers your employees fast and reliable internet via our fibre optic infrastructure. So they can browse efficiently, use e-mail and work with cloud applications, such as CRM, office or financial software without long upload times, buffering and slow downloads. In addition, our internet solution is ideal to make your software, platforms or infrastructure accessible for customers and partners.

From standard access to complex redundancy

Eurofiber internet comes in 7 different variants: from simple access to a complex redundant transit solution. With this solution Eurofiber is responding to the current market demand for scalability, redundancy and freedom of choice:

- scalability, you can easily add more bandwidth
- redundancy on the (fibre optic) infrastructure & various redundancy protocols
- freedom of choice to use own IP addresses or Eurofiber IP addresses.

Speeds up to 10 Gb/s

The bandwidth of the internet service is the same as the bandwidth of our underlying Ethernet connection. This is also always symmetrical: the upload speed is the same as the download speed. With business internet you can send files quickly using several devices and work with online applications at the same time. And applications such as camera surveillance and cloud computing work considerably faster and better via internet over a fibre optic connection.

Eurofiber internet solutions range from a standard connection to a complex redundant variant for business-critical purposes. Business internet is available in a variety of standard configurations, high bandwidths and redundancy options. We also provide support for VRRP and BGP failover protocols.

Anti-DDoS

With increasing frequency we read about the inaccessibility of websites and internet problems, caused by a DDoS attack (Distributed Denial of Service). This inaccessibility has a major impact on businesses and users. Eurofiber Anti-DDoS, reactive or proactive, protects the traffic on your network and infrastructure against DDoS attacks.

"Strong performance thanks to Eurofiber's dedicated fibre optic infrastructure."

Internet and our fibre optic connections

To provide your organisation with optimum internet access, Eurofiber always provides its internet services over our fibre optic network. If you would like to know more about other Eurofiber services, then read our product leaflets Ethernet VPN, Managed Dark Fibre, WDM and Secure Cloud Connect.

Service

The Eurofiber business internet service has a very high availability of minimum 99.9% on the fibre optic infrastructure. In addition, you can rely on the 24x7 support of our expert Customer Operations Support department.
