NO NONSENSE

MAKING THE
DIFFERENCE

Van Moer Logistics

Making the difference
for their customer

Van Moer Logistics has been a Eurofiber customer since 2014. We asked them some feedback about their cooperation with Eurofiber. Stijn Spooren, network manager: "Everything started with the need of an internet access when we moved all physical services to our data center at our headquarters in Zwijndrecht.

Move to Data Center

We needed a very good, stable internet connection with sufficient bandwidth. We compared a number of suppliers and Eurofiber appeared to be the best partner."

Over time, Van Moer Logistics opened several sites in the port of Antwerp and the rest of Flanders, including in Ghent, Vilvoorde and Zellik. Via the IP-VPN network all sites are provided with a layer 3 connection to the data center of Arxus.

Hybrid Cloud Solution

Meanwhile, almost all of Van Moer's IT solutions are being carried out at their Managed Cloud Provider Arxus. Van Moer uses a hybrid cloud solution at Arxus.

For example, Arxus introduced Office 365 in Van Moer's workplaces, the core of the logistics systems is being run in the Belgian Arxus private cloud and they can scale to Azure. The switch from on-premise to the cloud guarantees a scalable and future-orient-

ted ICT environment that adequately supports the development of the group.

Competitive offer

All sites must also have a very efficient and fast connection to the data center. Stijn Spooren: "We chose Eurofiber for the IP-VPN project for various reasons. Firstly, we are very satisfied with Eurofiber and we want to continue working with them. Secondly, the necessary infrastructure is already present in Kallo and Zwijndrecht. For the other sites we also opted for Eurofiber because of the presence of the network and their competitive offer. The choice for fiber optic is an obvious one for us, since it is the only technology that can provide us with the speed that we need."

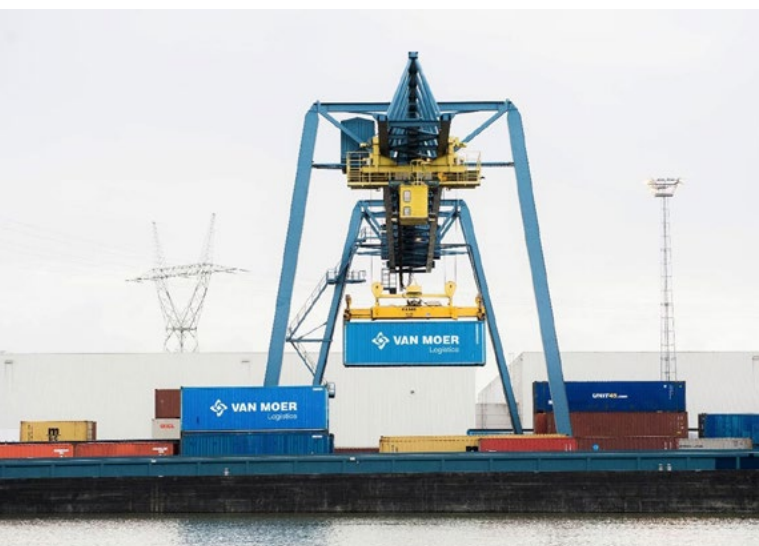

Who is Van Moer?

Some facts about Van Moer Logistics: for Van Moer Logistics, making the difference for their customers is their great mission. In a world where everything is meticulously timed and organized, the company doesn't want to leave anything to chance and provide their customers a state-of-the-art service. They accomplish this by listening carefully to their customers and offering them a tailor-made solution.

- 750 employees
- 14 sites
- 330,000 m² of warehouse space
- Weekly 55,000 tons of cover
- 10,400 containers per month.

The case Van Moer Logistics

- Stable internet connection with sufficient bandwidth
- Layer 3 connection via the IP-VPN network
- Hybrid cloud solution
- Efficient and fast connection to the data center
- Presence of necessary infrastructure
- Necessity of fiber optic

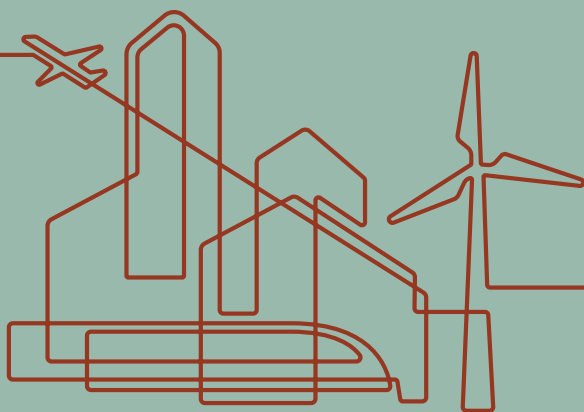

"We compared a number of suppliers and Eurofiber appeared to be the best partner"

Curious to hear more about what we could achieve for your organization?

Eurofiber has been a fast-growing international provider of industry-leading digital infrastructure since 2000. Relying on our own fiber optic network and data centers, we provide smart, future-proof solutions for companies, government bodies and non-profit organizations. Customers have complete freedom to choose the services, applications and providers they need, allowing them to tap into the full potential of digital innovation. Eurofiber has an extensive fiber optic network in the Netherlands and Belgium, it unlocks its four data centers of its own and almost all public data centers in the Benelux.
