Secure Cloud Connect

Where the cloud meets connectivity

- Direct connection to leading cloud service providers
- Secure and reliable private network
- Guaranteed availability and low latency
- End-to-end service with optional Configuration Service

The public cloud has become a crucial part of organizations' operations. With Secure Cloud Connect from Eurofiber, you always have secure and direct access to the cloud service provider of your choice. This complete end-to-end solution provides you with direct access via a secure private network, with guarantees on availability and low latency.

Efficient total solution with SecureBy Design - Customized for your Cloud Connectorganization

Eurofiber provides you with a complete solution with Secure Cloud Connect. We connect your organization to your cloud service provider via a private network, completely separate from the public internet. Eurofiber delivers an end-to-end service from your office location and/or data center location to public cloud service providers such as Microsoft Azure, Amazon Web Services (AWS), Google Cloud Platform, and Oracle. Other cloud service providers are available upon request. With Secure Cloud Connect, you manage your applications in the cloud while we take care of the connectivity.
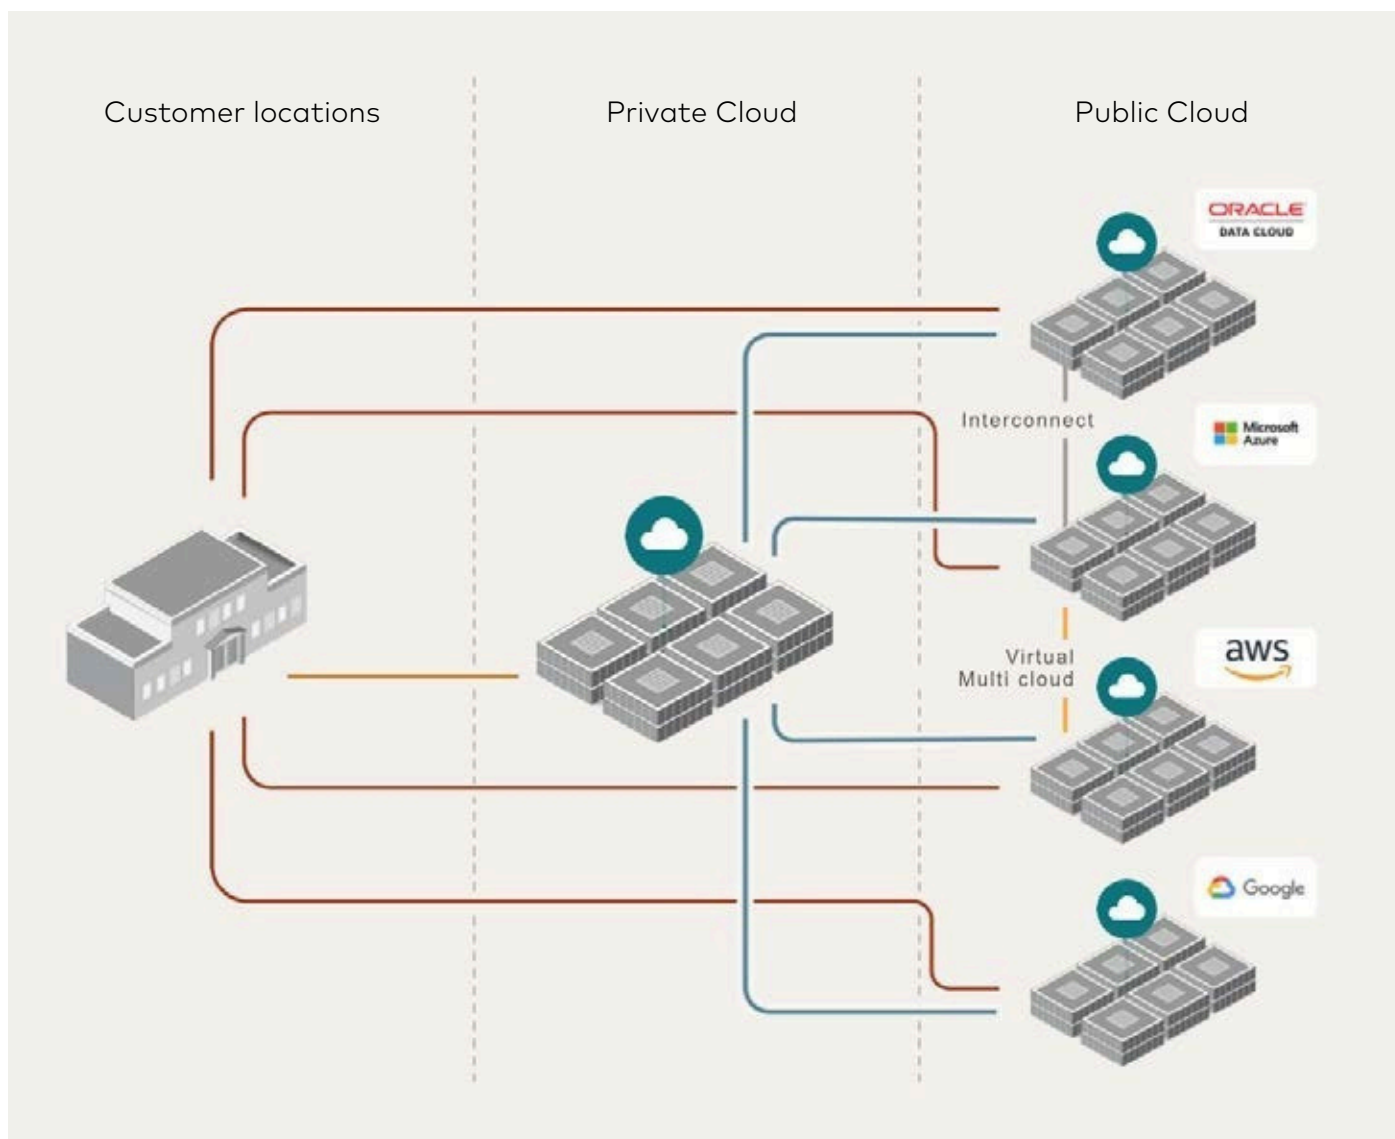

We always offer a complete solution that seamlessly aligns with your organization's needs. Working together with Eurofiber's Solution Architects, a design is established based on Availability, Reliability, Scalability, and Security, all 'by design'.

Optimal availability and support

Secure Cloud Connect is always redundantly configured and supports all bandwidths of various cloud service providers, from 50 Mb/s to 100 Gb/s. To provide your organization with reliable access to the cloud service providers of your choice, we always deliver Secure Cloud Connect via Eurofiber's fiber optic infrastructure and the Eurofiber private Layer-2 network. Additionally, you can rely on 24/7 support from our Network Monitoring Center (NMC).
