# Key benefits of Cloud Connect:
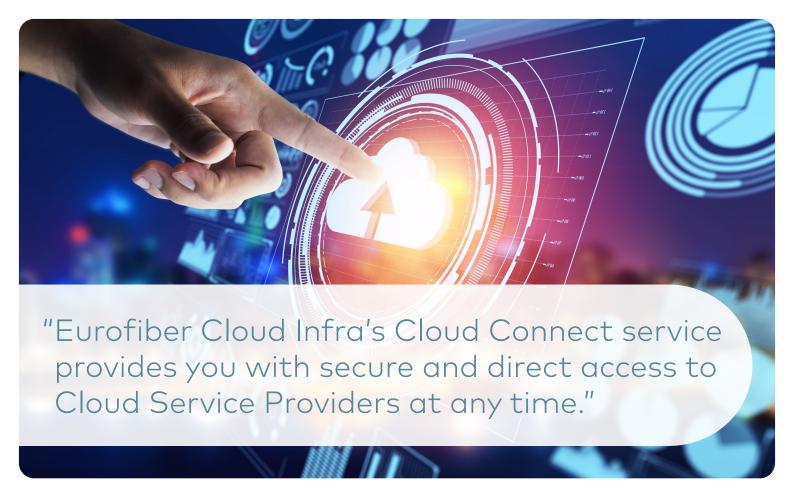

- Direct connection to leading Cloud Service Providers

- Secure and reliable private network

- Guaranteed availability and low latency

- Bandwidth flexibility (upscaling and downscaling options)

"Eurofiber Cloud Infra's Cloud Connect service provides you with secure and direct access to Cloud Service Providers at any time."

**More and more organizations are opting for a hybrid digital infrastructure, and are choosing to migrate the applications that are suitable for public cloud solutions and with limited data traffic requirements to the cloud.**
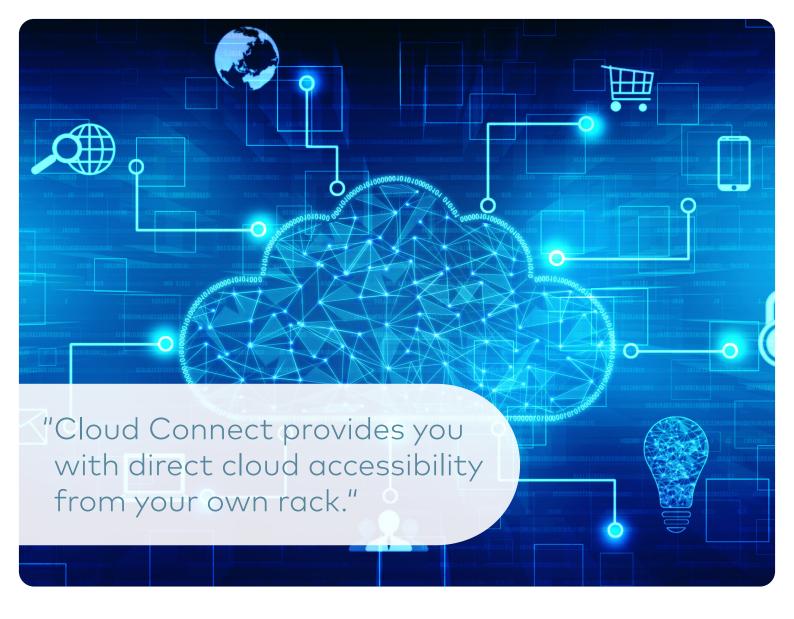

Eurofiber Cloud Infra's Cloud Connect service provides secure and flexible connections to a wide range of public Cloud Service Providers. Cloud Connect is a fast and easy way for organizations to create a direct connection to the Cloud Service Provider of their choice, enabling them to benefit from the flexibility offered by the public cloud. Securely, and with guaranteed connectivity performance.

Eurofiber Cloud Infra has developed Cloud Connect to allow you to set up a direct connection to cloud providers from more than 80 datacenter locations. Through Cloud Connect you are connected to a private, or closed, network that is separate from the public internet. This makes it possible for you to make optimum and secure use of the public cloud of your choice using the dedicated bandwidths reserved for you. This private network is connected to all the Eurofiber Cloud Infra locations. From there, we provide stable, fast private connections to multiple public cloud providers, such as Microsoft Azure, Amazon Web Services (AWS), Google Cloud Platform, Oracle as well as others on request.

### Why choose Eurofiber Cloud Infra's Cloud Connect service?

Cloud Connect is available in several different bandwidths, scalable from 100 Mb/s to 1 Gb/s (or more on request). If more bandwidth is needed, it is possible to upscale quickly and easily, and to downscale again as required.

As we have contracts with many different cloud providers, as a user you have the freedom to access one or multiple clouds flexibly, without being tied to a single region. It is also possible to specify the bandwidth yourself and to upscale and downscale easily, as and when required.

*"Cloud Connect provides you with direct cloud accessibility from your own rack."*

## Who benefits from Cloud Connect?

Cloud Connect can deliver key benefits to organizations that want to connect quickly, securely and flexibly to the public cloud. Cloud Connect provides you with direct cloud accessibility from your own rack.

## Hybrid solutions

More and more organizations are opting for a hybrid digital infrastructure. Applications that are suitable for a public cloud solution and with limited data traffic requirements can be easily migrated to the cloud. Alternatively, you can choose to continue managing applications with sensitive data and high latency requirements yourself.

More and more organizations are opting for a hybrid digital infrastructure, and are choosing to migrate applications that are suitable for public cloud solutions to the cloud. You can continue managing applications that are not suitable for the public cloud yourself.

Cloud Connect enables you not just to choose your own cloud provider, but also to switch providers quickly and efficiently. This hybrid solution is managed for you end-to-end with continuous platform optimization.

In this way, your data are stored securely on hardware as well as in the cloud. Reconfiguring a digital infrastructure can be a highly complex undertaking. This is mainly due to the various factors, such as colocation, connectivity, security, hardware and cloud tooling, that need to be taken into account. Eurofiber Cloud Infra's services also include a central, controlled cloud infrastructure. The services are agile, secure and scalable. The set-up enables you to determine the rate at which data is transferred to the cloud yourself.
