

Environmental Policy for the Eurofiber Group

Eurofiber is committed to minimizing our environmental impact and providing sustainable digital infrastructure services to our customers. We understand the critical role our services play in our customers' operations and their business success. Therefore, we strive to deliver the highest level of customer satisfaction by providing innovative, efficient and environmentally responsible open network solutions and other sustainable digital infrastructure services.

Eurofiber is committed to complying with ISO 14001:2015 standard requirements and other applicable laws & regulations. We recognize that our activities have an impact on the environment. As a provider of digital infrastructure services, we are committed to minimizing our environmental impact, preventing pollution and continuously improving our environmental performance. Our Eurofiber Management System is designed to ensure that our services minimize environmental impact and meet or exceed our customers' expectations.

Our Eurofiber Management System is based on the following principles:

Carbon Footprint Reduction: Sustainability and climate action are core to our operations. We are committed to SBTi-approved, Paris-aligned targets to achieve net-zero by 2040. This includes a 90% reduction of Scope 1 and 2 emissions by 2030 through renewable energy, energy efficiency, fleet electrification, and the elimination of fossil fuels to minimize our environmental impact.

Sustainable Procurement: Ensure procurement for new build, maintenance and replacements comes from sustainable, circular sources by applying sustainable procurement policies, engaging suppliers on sustainability issues and promoting circular-economy principles across our value chain.

Biodiversity Conservation: Eurofiber aims to contribute to the conservation of biodiversity in the areas where it operates, by restoring the environment to its original condition after our activities are done and supporting local biodiversity conservation initiatives. We also take this into consideration while planning our maintenance or business continuity tests in regards to noise, light or soil pollution.

Environmental Awareness: Eurofiber aims to increase environmental awareness among its employees and stakeholders by conducting environmental awareness campaigns, providing training and education on environmental issues and promoting a culture of environmental responsibility and sustainability.

Eurofiber's commitment to the environment is reflected in our code of conduct and our pledge to the Sustainable Development goals from the United Nations, which outlines our ethical and social responsibilities as a corporate citizen. We are committed to operating in an environmentally responsible manner, promoting sustainability and contributing to the communities in which we operate.

Eric Kuisch
Chief Operating Officer
