ABOUT

I'm a web developer from Georgia who has partnered with design firms and businesses to develop dozens of web applications all across Southeast Georgia. My brand currently hosts and maintains 30+ websites.

SKILLS AND TECHNOLOGIES

Javascript/Typescript
React (NextJS)
PHP

Git
Figma/Sketch
WHM/Cpanel/DirectAdmin/SQL

CSS (frameworks: Tailwind,
Chakra, Styled Components)

EXPERIENCE

Green Zero Development
Full Stack Web Developer / Owner

Dec 2017 - Present

- I have designed, developed, and hosted websites requested by individual clients. These projects involved my participation throughout the entire development cycle. I've met with clients to discuss project specifications, created milestone documents for better process transparency, and provided continual support for live applications.
 - I acquired and ported a server of 30+ websites to new hosting providers. I continue to host and maintain the majority of the acquired websites and have used both cloud and traditional hosting providers to do so. Some technologies involved in this effort include WHM/Cpanel, DirectAdmin, SQL, and PHP.
 - I have worked with design firms to develop web applications that solve specific business requirements. Some important requirements include better UI/UX experiences for customers, greater editorial control for clients, and faster, more reliable web application performance.
-

PROJECTS

Anderson's General Store

- I integrated Next.js with Shopify to allow for greater control over page structure and easier content editing. With this integration, the client was able to benefit from the robust POS system that Shopify offers without sacrificing design and development flexibility.

Lee, Hill, and Johnston

- I ported the site from an older tech stack (GoHugo/Forestry.io) to a newer one (Next.js/WordPress). The sunset of Forestry.io was the primary reason for the port, but site presentation and performance were also improved during the rewrite.

Bulloch Academy

- I worked closely with the client to deliver a product that maximized performance without making it harder to edit or manage. The academy had a large number of pages, so careful consideration was given to the structure of the CMS.
-
