

Title:
Rental bikes powered by
blue energy

Authors:
Gabriela Andino Godoy
Marina Bellido Donaire

School's name:
IES Isbilya

Idea:
Our idea represents a eco-friendly
touristic application for blue energy.
By placing marine current turbines
in the sea a great quantity of clean
energy could be generated and stored
to be later used for turistic purposes,
such as charging electric bikes.

This idea could help to develop
coastal tourism in the mediterranean
area in a healthy and sustainable
manner.
