

The exploitation of the energy potential of the seas that is sustainable is a key element of the "Blue Economy", and here comes ENEA.

ENEA is a national agency for new technologies that studies the seas to generate renewable energy.

IT'S BASED ON :

-RENEWABLE ENERGY.

- EXPLOITATION OF THE SEA FOR RENEWABLE ENERGY.

Help us fight pollution with renewable energies, one of our goals is to bring our project in schools to spread awareness about pollution and allow a better future!

# BLUE DEAL

Project co-financed by the European Regional Development Fund

## What is renewable energy?

Renewable energy are natural sources who are capable of regenerating in continuation, therefore they are almost inexhaustible. These are sources at low environmental impact and that represents an advantage for both human health that for the environment.

## How ENEA takes advantage of renewable energies.

ENEA uses technologies that make possible the exploitation of marine energy. Drawing mechanic energy from the movement of waves such as:

- The energy of the tides.
- The energy of the wave motion.
- The energy of the currents.

These are converted in electricity.

## How many are the benefits?

- There are no polluting emissions or waste to be disposed of.
- Renewable energy is cheap and affordable for everyone.
- The air will be cleaner.
- Reduce the greenhouse effect.
