SAFE TRACK WAY™

By Veritrufide Accura Private Limited

(Internationally Patented Safety & Verification Technology)

1. Company Overview

Veritrufide Accura Private Limited is a safety-technology company building India's first **real-time, offline verification and accountability infrastructure**. Our internationally patented platform, **Safe Track Way™**, transforms unverified offline interactions into secure, traceable, and trusted engagements.

We operate at the intersection of **public safety, digital identity, law enforcement enablement, and smart infrastructure**.

2. Our Flagship Platform – Safe Track Way™

Safe Track Way™ is an **offline-first safety and verification ecosystem** designed to secure:

- Passenger travel
- Institutional entry
- Service-provider interactions
- Public and private spaces

It works **without requiring smartphones for service providers**, making it ideal for India's offline population.

3. Core Products

3.1 Safe Track Way™ Smart ID Card

(QR / RFID Enabled)

Description:

A secure, tamper-resistant Smart ID Card issued after Aadhaar-based KYC, serving as a trusted identity and verification token.

Key Features:

- Unique User ID
- QR Code / RFID chip
- Aadhaar-verified identity
- Works without mobile app
- Can be blocked & reissued if lost

Use Cases:

Auto & e-rickshaw drivers, service providers, students, staff, visitors.

3.2 Real-Time Verification Scanner

(Mobile Web / App Interface)

Description:

A lightweight scanning system used by users or institutions to instantly verify Smart ID Cards.

Key Features:

- Instant verification status
- Records time & location
- Logs interaction automatically
- No app required for card holder

3.3 Interaction Logging Engine

(Core Patented Logic)

Description:

Every scan creates a **verified digital record** of:

- Who interacted
- When the interaction occurred
- Where it occurred

This becomes the foundation for accountability and safety.

4. Command & Control Center (C3 Platform)

Description:

A centralized, AI-enabled dashboard that monitors real-time interactions across cities and institutions.

Key Capabilities:

- Live interaction tracking
- Last-interaction search
- Analytics & alerts
- Police & authority access (role-based)

5. Law Enforcement Support Module

Purpose:

Enable police to retrieve **last verified interaction within 10 minutes**, instead of 5–6 hours.

Benefits:

- Faster Phase-1 investigations
- Improved rescue & evidence quality
- Proactive crime deterrence

6. Institutional Safety Solutions

6.1 Campus Entry & Visitor Management

- Verified student & staff ID cards
- Outsider verification via Smart ID
- Real-time count of people inside campus
- Eliminates manual registers

6.2 Corporate & Workplace Safety

- Verified workforce & vendors

- Secure visitor tracking
- Accountability during emergencies

7. Mobility & Passenger Safety Solutions

- Offline auto / e-rickshaw verification
- Safer rides without booking apps
- Women safety enhancement
- Traceable last interaction

8. Key Differentiators

- **Internationally Patented Technology**
- Works in **offline environments**
- No smartphone required for service providers
- Reduces investigation time to **under 10 minutes**
- Multi-sector scalability
- Creates a new category: *Offline Safety Infrastructure*

9. Deployment Model

- City-wise rollout
- Institutional onboarding
- Police collaboration
- Pilot → Scale → National expansion

10. Current Status

- Product under active development
- MVP ready for pilots
- Initial discussions with law enforcement & institutions
- Launch planned in **Chandigarh, Mohali, Panchkula, Gurugram, and Delhi**

11. Vision

To build **India's most trusted offline safety and verification network**, ensuring every interaction is **verified, traceable, and accountable**.
