The only Career AI Academy for Professionals in Macedonia

Sixteen weeks with a clear structure and a bias toward building. Every module ends in a **mentored project** — a real thing you make with guidance from our team, not a take-home exercise. The program closes with an in-office, real-life build and Demo Day, shared with the Implementers cohort.

35–50%

higher pay for AI specialists vs. peers without AI skills

What you'll become

AI FOR PROFESSIONALS

Career AI Academy for Professionals

Become an AI-native professional. Work with AI every day, automate the busywork and raise your output — you direct, check and decide while AI drafts and proposes. No coding background required.

Docs & data

No-code automation

Personal AI system

WHO IT'S FOR

Marketing, HR, ops, finance, sales — anyone who wants AI to genuinely multiply their output without writing a line of code.

22

AI SOLUTIONS

Learn from the team that shipped it in the real world.

We've implemented **22 AI solutions** for businesses across **Macedonia, Croatia and Slovenia**. Your mentors teach the exact tools and methods they use on live client work — not theory.

Shaded weeks throughout this brochure are **shared modules** — taught together with the Implementers cohort.

Sixteen weeks on the Professionals track. **Shaded rows are shared modules** taught together with the Implementers cohort. Every module ends in a mentored project — ten across the program.

 Shared module — taught together with the Implementers cohort

IN-OFFICE Weeks 14–16 run on-site at our offices

Week 1 FOUNDATIONS

A shared picture of what AI can really do in your role and where it saves time, with a hands-on tour of ChatGPT, Claude and Gemini. It establishes the human-in-the-loop habit: AI drafts and proposes, you direct, check and decide.

Weeks 4–5 DOCS & DATA

Use AI to summarize and compare long documents, pull out key points and risks, and interrogate spreadsheets for trends and KPIs without a data background — then turn results into polished decks.

Week 8 AUTOMATION, DEEPER

Turn n8n into everyday leverage with reusable no-code patterns and templates (classify, route, summarize, notify, with a human-approval step) and compare Make and Zapier.

Week 14 IN-OFFICE

PROCESS MAPPING

Delivered on-site on one of our own processes. Day 1: map the current state end to end — steps, process vs. waiting time, and where the waste is. Day 2: design the AI-optimized future state with insertion points and ROI. Uses BPM methodology and Miro, with Claude Code generating the maps in Miro from a description.

Weeks 2–3 SHARED

VIBE CODING

Build working software by describing it well to AI, with context engineering as the core skill. Students craft a strong build-prompt with an LLM, then hand it to an AI builder (Lovable, Replit, Bolt) to generate a full app — which the project, Ship It Live, takes to a live URL in front of real users.

Weeks 6–7 SHARED

AI AUTOMATION CORE

Automation as a discipline, and fluency in n8n — canvas, nodes, connecting apps and shaping data — first by hand, then using n8n's AI builder to generate whole workflows and learning to read, fix and finish what it produces.

Weeks 9–13 ADVANCED TRACK

The AI tool ecosystem (NotebookLM, Custom GPTs, Copilot agents, Perplexity) wired into daily work; multimodal AI for images, voice and video; then consolidation into a personal AI work system of custom instructions, projects and a prompt library.

Weeks 15–16 IN-OFFICE

FUTURE-STATE IMPLEMENTATION

Two weeks to build the future-state solution designed in the mapping days — the real automation, app or agent that optimizes the process — with both cohorts contributing at their level. The program closes with Demo Day.

Every module ends in a mentored project — a real thing you build with guidance from our team, not a take-home exercise. Across the sixteen weeks you ship ten.

01 AI Starter Kit

A personal prompt library plus a first hands-on win — map where AI saves time in your role.

02 Ship It Live

Build an app with AI, deploy it to a live URL and put it in front of real users to land first customers — run as guided mentorship sessions.

03 Direct & Deliver

Produce a data-driven brief and a polished deck using AI, end to end.

04 Always-On Automation

A live n8n workflow that runs on its own on a trigger or schedule.

05 Smart Workflow

Add classification, routing and a human-approval step to your automation.

06 Knowledge Copilot

Build a role assistant or knowledge hub tailored to your work.

07 New Powers

Add voice, image and video to what you build with multimodal AI.

Projects 8-10 run on-site at our offices on one of our own processes — the in-office real-life build.

IN-OFFICE · REAL LIFE**Projects 8–10 · the on-site build****08****Current-State Map**

Day 1 — map the real process end to end.

09**Future-State Blueprint**

Day 2 — design the AI-optimized future state with a clear ROI story.

10**Build the Future State**

Two weeks to implement the solution, presented at Demo Day.

Ready to become AI-native?

A practical AI program with a clear structure and skills you use at work — for people who want to work more efficiently and get ahead.

Frequently asked

What learning format is it?

Practical, interactive learning through live online classes.

Do I need prior knowledge?

No. The program is designed for beginners too — the curriculum takes you from the basics to advanced skills step by step.

Will I get a certificate?

Yes. On successful completion you receive a certificate confirming your new knowledge and skills.

What are the payment options?

Several flexible options, including a one-off payment and installments.

What if I fall behind?

You get access to class recordings, extra materials and mentor support to catch up at your own pace.
