

Mayfair range of quality electric screens

Unique 3 year warranty on all products

The “Mayfair” range extends from 1.5 to 4.0 metres wide. They come in infra red options up to 2.4m or there are radio control options from 1.5m right up to 4.0m. Aspect ratio’s available are Video (4:3), Widescreen (16:9) Widescreen (16:10) or Square (1:1). Whatever your requirements we have a screen to suit your needs

Installation of your Sapphire Screen

Our screens save you hours of labour in the installation process. Our unique bracket system means that you can find the best fixing on wall or ceiling and click the screen into place. The process of wiring is easy as we supply a UK plug meaning you can “Plug and Play” without having to get an electrician in many cases.

How will it look when installed?

Our screens use the best aluminium profile and you will not find many products with a better finish. The fabric is carefully checked and is one of the best in class for flatness and image quality. The black borders are sprayed automatically by a computer controlled machine meaning that there is none of the border bleed that you find in many poorly made products

How will I control my screen?

All Sapphire screens come with a remote control - either infra-red or radio frequency.

Should you need to control manually they all have either an inline switch or a manual switch on the casing. We also have other optional controls at additional cost.

I would like infra-red but I need to hide the screen in the ceiling or behind a pelmet.

No problem - every infra-red screen ships with a remote extender cable to plug into the screen casing. The sensor has a tape attached to secure to the ceiling, wall or screen casing, meaning that the IR window on the front of the screen is not required.

If you want to control your screen remotely but do not have a 12V trigger on your projector you need our STR accessory. Put the projector power through and it sends a radio signal to the screen to drop the screen and retract when the projector shuts down.

Works with all Sapphire projector screens - even if you have one a few years old.

If you do not have a Sapphire Screen we can provide the kit to enable this to work with most screens
