

## Signal Booster Strength

In some applications, a signal booster (B120-000-SL) should be used with this cable to ensure a signal strong enough for your display. An alternate solution is to use a DVI over Cat5 Extender (B140-101X) in place of a 75-foot DVI cable and signal booster.

# DVI Single Link Cable, Digital TMDS Monitor Cable (DVI-D M/M), 75 ft. (22.86 m)

# MODEL NUMBER: P561-075

# Description

This DVI Single-Link TMDS cable delivers the high performance and high bandwidth needed for today's digital video displays. Gold-plated contacts ensure excellent conductivity, while double shielding (foil and braid) provides maximum EMI/RFI protection. Use in conjunction with DVI video cards that are specified as Single Link. Both DVI connectors are molded, have integral strain relief for long life reliability, and ferrite collars to drain off extraneous electrical interference. In most applications, a signal booster (B120-000-SL) will need to be used with this cable to ensure a signal strong enough for your display.
