Outstanding resistance in both longitudinal and transversal directions.

MacArmour is a 2-in-1 product which combines a homogeneous structure of steel wire rope with double twist wire mesh. The result is a unique product that has an excellent **out-of-plane stiffness** (punch resistance) and an outstanding **tensile strength** in the longitudinal and transversal direction. This maximises the **serviceability** of the protected infrastructure: the higher the stiffness, the lower the risk of hampering running infrastructure after a rockfall event.
