WORK EXPERIENCE

Developer 1
Gryphon LLC

01/2020 - Present   *Remote*
Achievements/Tasks
- Provided front-end development services using HTML, CSS and JavaScript along with technologies such as Vue.js and Sass
- Effectively communicated with an entirely remote team and followed agile methodologies
- Built modules for the ASP.NET CMS DNN (formerly DotNetNuke) using C# and various front-end technologies

Web Developer
Swiftpage (Now ACT LLC)

04/2019 - 11/2019   *Scottsdale, AZ*
Achievements/Tasks
- Maintained both the company site and the product site as the sole web developer
- Coordinated heavily with a designer to deliver beautiful and usable web experiences
- Developed backend architecture in the Sitefinity CMS using the C# framework .NET
- Created accessible and modern front-end experiences using HTML, CSS, JavaScript, Bootstrap, and jQuery

Web Development Intern
Swiftpage (Now ACT LLC)

05/2018 - 04/2019   *Scottsdale, AZ*
Achievements/Tasks
- Redesigned the company site using HTML, CSS, and JavaScript (jQuery) on top of the Bootstrap framework to help usher in the company's new focus on modernity
- Componentized the product site using WordPress as a headless CMS and React.js as the front-end creating a seamless user experience for both in-house creators as well as the users
- Adapted to a fast-paced, marketing environment iterating on work quickly and efficiently for ever-changing sales-driven needs

EDUCATION

B.S. in Computer Science (Unfinished)
Arizona State University

SKILLS

HTML   CSS   Javascript   Sass   Vue.js
React.js   Node.js   C#   ASP.NET   jQuery

PERSONAL PROJECTS

Dynamic Form
- **Description:** A dynamic form the user can add or remove elements from and it will adjust automatically
- **Built With:** HTML, CSS, JavaScript (jQuery) with the Chosen.js plugin for the select option customization
- **Solved:** User's defining an undetermined amount of fields (generally paired with a backend CMS solution) and having the styling be adaptive
- **Next Steps:** Convert code to Vue.js and provide copy & paste ready code to someone who uses it
- **Link:** https://github.com/landon-snodgrass/dynamic-form

Personal Website
- **Description:** My personal website used to showcase my projects and skills
- **Built With:** Next.js, Sass, WordPress Backend (Headless)
- **Solved:** Gives me a space on the web to showcase my skills and (hopefully) sell my freelance services
- **Next Steps:** Improve page speeds & SEO as well as a major content update. Implement HTTPS
